

Table A1. A brief chronology of management measures affecting Gulf of Maine cod.

---

**1973**

Total Allowable Catch (TAC) limits implemented by the International Commission for the Northwest Atlantic Fisheries (ICNAF) for Division 5Y (Gulf of Maine) cod.

Minimum codend mesh size at 4 1/2" (114 mm).

**1977**

Fishery Conservation and Management Act (FCMA) implemented. Management under the auspices of the New England Fishery Management Council.

**1977-1982**

Management of groundfish resources under the Fishery Management Plan (FMP) for Atlantic groundfish.

Carried forward TACs; implemented by vessel tonnage class and calendar quarter with trip limits.

Minimum codend mesh size increased to 5 1/8" (130 mm).

**1982-1985**

Management of groundfish resources under the "Interim" Plan for Atlantic groundfish.

Eliminated direct catch controls; primary tools for fishery management were minimum mesh sizes and minimum landing sizes.

**1983**

Minimum codend mesh size increased to 5 1/2" (140 mm).

**1985**

Northeast Multi-species FMP implemented. Amendments 1-4 retained indirect controls, including minimum mesh and minimum fish landing sizes.

**1989**

Minimum fish size = 19" (48 cm) for commercial and recreational sectors.

**1994**

January 1 Amendment 5

50% reduction in F and effort over 5-7 years.

Days at Sea (DAS) monitoring

Implemented a Mandatory Reporting Scheme

May 1 Amendment 5 (again)

Minimum codend mesh size increased to 6" (152 mm), diamond or square.

**1996**

May 1 Amendment 7

Established rebuilding program based on Fmax target fishing mortality

Established Target TACs

Accelerated Days at Sea reductions

Established Framework Adjustment Process and the Multi-species Monitoring Committee to permit annual adjustments to management measures

Minimum fish size increased to 20" (51 cm) for recreational sector.

---

Table A1 (Continued).

---

**1997**

May 1 Framework 20

Target TAC: 2,605 mt

Gulf of Maine cod trip limit: 1,000 or 1,500 lbs/day

Minimum fish size increased to 21" (53 cm) for recreational sector.

**1998**

May 1 Framework 25

Target TAC: 1,800 mt with trigger provision

Gulf of Maine cod trip limit 700 lbs/day

Series of 1-month rolling closures from Massachusetts Bay to Penobscot Bay.

Year-round closure of portions of Jeffreys Ledge and Stellwagen Bank (WGOM Closed Area)

June 25 Framework trigger pulled

Gulf of Maine cod trip limit: 400 lbs/day

**1999**

February 1 Framework 26

Additional month-block (30x30 minutes) closures implemented for February and April

May 1 Framework 27

Target TAC: 1,300 mt with trigger provision

Gulf of Maine cod trip limit: 200 lbs/day

Minimum square mesh increased to 6.5" (165 mm).

May 28 Framework trigger pulled

Gulf of Maine cod trip limit: 30 lbs/day

August 3 Interim Rule

Gulf of Maine cod trip limit: 100 lbs/day

**2000**

January 5 Framework 31

Gulf of Maine cod trip limit: 400 lbs/day- 4,000 maximum/trip.

Additional month-block (30x30 minutes) closures implemented for February

May 1 Framework 33

Target TAC: 1,900 mt with trigger provision

Continuation of most Framework 27 and 31 measures

Year-round closure of WGOM area extended until April, 2002.

November 1 Framework trigger pulled

One-month closure of Cashes Ledge

**2001**

January 1 Framework trigger pulled

Additional month-block (30x30 minutes) closures implemented for January

May 1 Annual Adjustment

Target TAC: 1,118 mt

Continuation of most Framework 27 and 31, and 33 measures.

---

<sup>1</sup> USA 1960-1993 landings from NMFS, NEFSC Detailed Weightout Files and Canvass data.

<sup>2</sup> USA 1994-2000 landings estimated by prorating NMFS, NEFSC Detailed Weightout data by Vessel Trip Reports.

Table A3. Distribution of USA commercial landings (metric tons, live) of Atlantic cod from the Gulf of Maine (Area 5Y), by gear type, 1965 – 2000. The percentage of total USA commercial landings of Atlantic cod from the Gulf of Maine, by gear type, is also presented for each year. Data only reflect Gulf of Maine cod landings that could be identified by gear type.

[a] Of 166 mt landed, 107 mt were by mid-water pair trawl and 42 mt were by drifting gill nets.

[b] Of 91 mt landed, 56 mt were by Danish seine and 27 mt were by drifting gill nets.

[c] Of 167 mt landed, 199 mt were by drifting gill nets and 38 mt were by Danish seine.

[d] Of 326 mt landed, 268 mt were by longline and 37 mt were by Danish seine.

[e] Of 181 mt landed, 152 mt were by longline and 23 mt were by Danish seine.

[f] Of 199 mt landed, 75 mt were by longline and 27 mt were by Danish seine.

[g] Of 186 mt landed, 159 mt were by longline and 16 mt were by Danish seine.

[h] Of 266 mt landed, 245 mt were by longline and 9 mt were by Danish seine.

[i] Handline and line trawl combined.

Table A4. Discard and total catch estimates (metric tons, live) for Gulf of Maine cod by otter trawl, shrimp trawl, and sink gillnet gear derived from 1989-2000 NEFSC Sea Sample data.

Year	Discard Estimates						Total Catch
	Total Landings	Included Landings	Discard Estimate	Discard to Landings Ratio	Total Discard

- [a] During 1963-1984, BMV oval doors were used in the spring and autumn surveys; since 1985, Portugeuse polivalent doors have been used in both surveys. Adjustments have been made to the 1963-1984 catch per tow data to standardize these data to polivalent door equivalents. Conversion coefficients of 1.56 (numbers) and 1.62 (weight) were used in this standardization (NEFSC 1991).
- [b] Spring surveys during 1973-1981 were accomplished with a '41 Yankee' trawl; in all other years, spring surveys were accomplished with a '36 Yankee' trawl. No adjustments have been made to the catch per tow data for these differences.
- [c] In the Gulf of Maine, spring surveys during 1980-1982, 1989-1991 and 1994, and autumn surveys during 1977-1978, 1980, 1989-1991 and 1993 were accomplished with the R/V DELAWARE II; in all other years, the surveys were accomplished using the R/V ALBATROSS IV. Adjustments have been made to the R/V DELAWARE II catch per tow data to standardize these to R/V ALBATROSS IV equivalents. Conversion coefficients 0.79 (number) and 0.67 (weight) were used in this standardization (NEFSC 1991).

Table A16. Standardized [for both door and gear changes] stratified mean number per tow at age and standardized stratified mean weight (kg) per tow of Atlantic cod in NEFSC offshore spring and autumn research vessel bottom trawl surveys in the Gulf of Maine, 1963-2000. [a, b]

[a] Strata 26-30 and 36-40.

[c] Spring surveys during 1973-1981 were accomplished with a '41 Yankee' trawl; in all other years, spring surveys were accomplished with a '36 Yankee' trawl. No adjustments have been made to the catch per tow data for these differences.

[d] During 1963-1984, BMV oval doors were used in the spring and autumn surveys; since 1985, Portuguese polyvalent doors have been used in both surveys. Adjustments have been made to the 1963-1984 catch per tow data to standardize these data to polyvalent door equivalents. Conversion coefficients of 1.56 (numbers) and 1.62 (weight) were used in this standardization (NEFSC 1991).

[e] In the Gulf of Maine, spring surveys during 1980-1982, 1989-1991 and 1994, and autumn surveys during 1977-1978, 1980, 1989-1991 and 1993, were accomplished with the R/V DELAWARE II; in all other years, the surveys were accomplished using the R/V ALBATROSS IV. Adjustments have been made to the R/V DELAWARE II catch per tow data to standardize these to R/V ALBATROSS IV equivalents. Conversion coefficients of 0.79 (numbers) and 0.67 (weight) were used in this standardization (NEFSC 1991).

Table A18. Estimates of instantaneous total mortality (Z) and fishing mortality (F)<sup>1</sup> for Gulf of Maine Atlantic cod, 1964 - 2000, derived from NEFSC offshore spring and autumn bottom trawl survey data.<sup>2</sup>

Time Period	Gulf of Maine					
	Spring		Autumn		Geometric Mean	
	Z	F	Z	F	Z	F
1964-1967	-	-	0.39	0.19	0.39	0.19
1968-1976	0.36	0.16	0.44	0.24	0.40	0.20 <sup>3</sup>
1977-1982	0.56	0.36	0.44	0.37	0.50	0.30 <sup>4</sup>
1983-1987	0.93	0.73	1.12	0.92	1.02	0.82
1988-1992	1.24	1.04	0.86	0.66	1.03	0.83 <sup>5</sup>
1993-1997	0.73	0.53	1.05	0.85	0.88	0.68
1998-1999	0.81	0.61	N/a	N/a	0.81	0.61

<sup>1</sup> Instantaneous natural mortality (M) assumed to be 0.20.

<sup>2</sup> Estimates derived from:

Spring:  $\ln(\sum \text{age } 4+ \text{ for year } i \text{ to } j / \sum \text{age } 5+ \text{ for years } i+1 \text{ to } j+1)$ .  
 Autumn:  $\ln(\sum \text{age } 3+ \text{ for years } i-1 \text{ to } j-1 / \sum \text{age } 4+ \text{ for years } i \text{ to } j)$ .

<sup>3</sup> Excludes autumn 1967-1968 data (3+/4+) since these gave large negative Z value.

<sup>4</sup> Excludes autumn 1976-1977 data (3+/4+) since these gave large negative Z value.

<sup>5</sup> Excludes spring 1991-1992 data (4+/5+) since these gave unreasonably low Z value.

Table A22a. Starting conditions and input data for short-term (2001-2003) and long-term (2001-2025) stochastic stock biomass and catch projections for Gulf of Maine cod.

Input for Projections:

Number of Years: 3; Initial Year: 2001; Final Year: 2003  
 Number of Ages: 7; Age at Recruitment: 1; Last Age: 7  
 Natural Mortality is assumed Constant over time at: .200  
 Proportion of F before spawning: .1667  
 Proportion of M before spawning: .1667  
 Last age is a PLUS group;

Age-specific Input data for Projection # 1

Age	Fish Mort Pattern	Nat Mort Pattern	Proportion Mature	Average Catch	Average Weights Stock
1	.0010	1.0000	.0400	0.441	0.283

7+	1.0000	1.0000	1.0000	10.881	10.881

Table A22b. Results of short-term stochastic stock biomass and catch projections for Gulf of Maine cod.

Projections for 2001-2003;  $F(2001)=0.73$ , Basis: Status quo 2000 point estimate.  
 Recruitment (age 1) 2001 and 2002 year classes derived from Beverton-Holt spawning stock-recruitment relationship based on 1981-1999 year classes.

SSB was estimated to be 13,100 t in 2000.

2001			2002			2003
F	Catch	SSB	F	Catch	SSB	SSB
0.73	7540	18210	$F_{0.1} = 0.15$	2619	21339	29819
